

Wilky - a govhavk 2019 project

**Hi , I am Marco and I am from project
Wilky**

**The challenge we are solving is
Australia@Sea: what is our future
relationship with the ocean environment**

The dataset we have used to solve this problem are API Wave data and Storm tide data

**Our solution is to relay whale sounds
from local passing pod to a interactive
terminal on the mainland**

**We did this by sampling underwater audio
and relaying it digitally**

By using live wave and tide data we can enhance the end user experience by providing more information about the whales current habitat

Thanks!

**Max Diamond - story board, hardware
research, asset procurement**

Ben Duncan - code ninja, mash master

Maro Grigull - team manager and hussler

Marcos barbosa - live footage

Tiam Tarran - video editing

**Additional thanks to the support team at
the Perigian govhack**
